This is the home page:

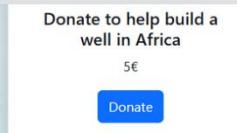

- Navbar and footer are present on every page, both were made using bootstrap, in the navbar there are two buttons (and a logo): shopping cart- allows users to open shopping cart and see the items they have added to the cart,... the home button allows users to get back to this “home page” (gallery page on the screenshot above).
- The grid system for the cards is from Bootstrap as well as the cards themselves, I have only slightly changed the design.
- There is a donate button on each card- when clicked, the item is added to the cart, the button changes color (to gray) and the user is unable to click it again.
- And yes, a nice background img as well :D

Mobility aids for a person in need

Support a bee-conservation project

5€

[Donate](#)

- After clicking the cart button, users can see what they have in their cart
- Total price and price with tax are calculated
- The table is from Bootstrap
- Users are also able to remove items from the cart, and if they wish, they can add them in again (when they return to the home page, the donate button is no longer disabled)

This is what you are donating to:

Help build shelters for the unhoused	5€	<input type="button" value="X"/>
Donate to help build schools in Africa	5€	<input type="button" value="X"/>

Total: 10€ --- Tax included: 12€

[Checkout](#)

- When user buys 3 or more items, message will show, if they remove items and the number of items in the cart is less than 3 the message will be hidden again. (In my case, giving the user a discount wouldn't really make sense, that's why I came up with this instead. I hope it isn't an issue)

This is what you are donating to:

Help build shelters for the unhoused	5€	<input type="button" value="X"/>
Donate to help build schools in Africa	5€	<input type="button" value="X"/>
Dinner for 1 person	1€	<input type="button" value="X"/>

Total: 11€ --- Tax included: 13.2€

Thank you for your enormous help! Since you have purchased 3 or more items, we will send you a special gift 😊

[Checkout](#)

- Also, if the cart is empty, user is unable to proceed to the checkout
- Lets continue to checkout by clicking the Checkout button

First name	Last name	E-mail

- I have added autocomplete to make filling in the data easier for the user
- For validation I have mostly taken advantage of the pattern attribute, so that for numeric values (card n., zip, ex. Date, cvv) only numbers will be accepted, there is also maximum number of digits set as well as minimum.
- The forms are from Bootstrap, (I made some changes and added a few more)
- The basic validation is done by a JS from Bootstrap, so that users are unable to donate unless required format is met.

First name	Last name	E-mail

Lastly, I tried to use quite a lot of Bootstrap classes in general. And I apologize for my JS code in advance, I know it is messy, that's because I was still learning while working on this assignment.
